

• PALLET BLOCKS

## DYNABLOCKPRESS

The extrusion press for pallet block production is able to produce all kinds of pallet blocks from all varieties of wood-based raw materials.

The press is able to produce up to 70 m<sup>3</sup>/day depending on the pallet block format produced, and is extremely flexible when changing production formats.

All pallet blocks are inspected one at a time for weight, dimensions and density, and an automatic feedback goes back to the press to ensure quality and compliancy with international standards.

A special control software system carries out an accurate real time analysis of production.

## AUTOMATIC PACKAGING SYSTEM
