

DYNABLOCKPRESS

BEST IN CLASS FOR:

PRESSED WOOD PACKAGING:
PALLET BLOCKS

The extrusion press for pallet block production is able to produce all kinds of pallet blocks from all varieties of wood-based raw materials.

The press is able to produce up to 90 m³/day depending on the pallet block format produced, and is extremely flexible when changing production formats. All pallet blocks are inspected one at a time for weight, dimensions and density, and an automatic feedback goes back to the press to ensure quality and compliancy with international standards.

A special control software system carries out an accurate real time analysis of production.
