

DYNABLOCKPRESS

The extrusion press for pallet blocks production is able to produce all kinds of pallet blocks from all varieties of wood-based raw materials.

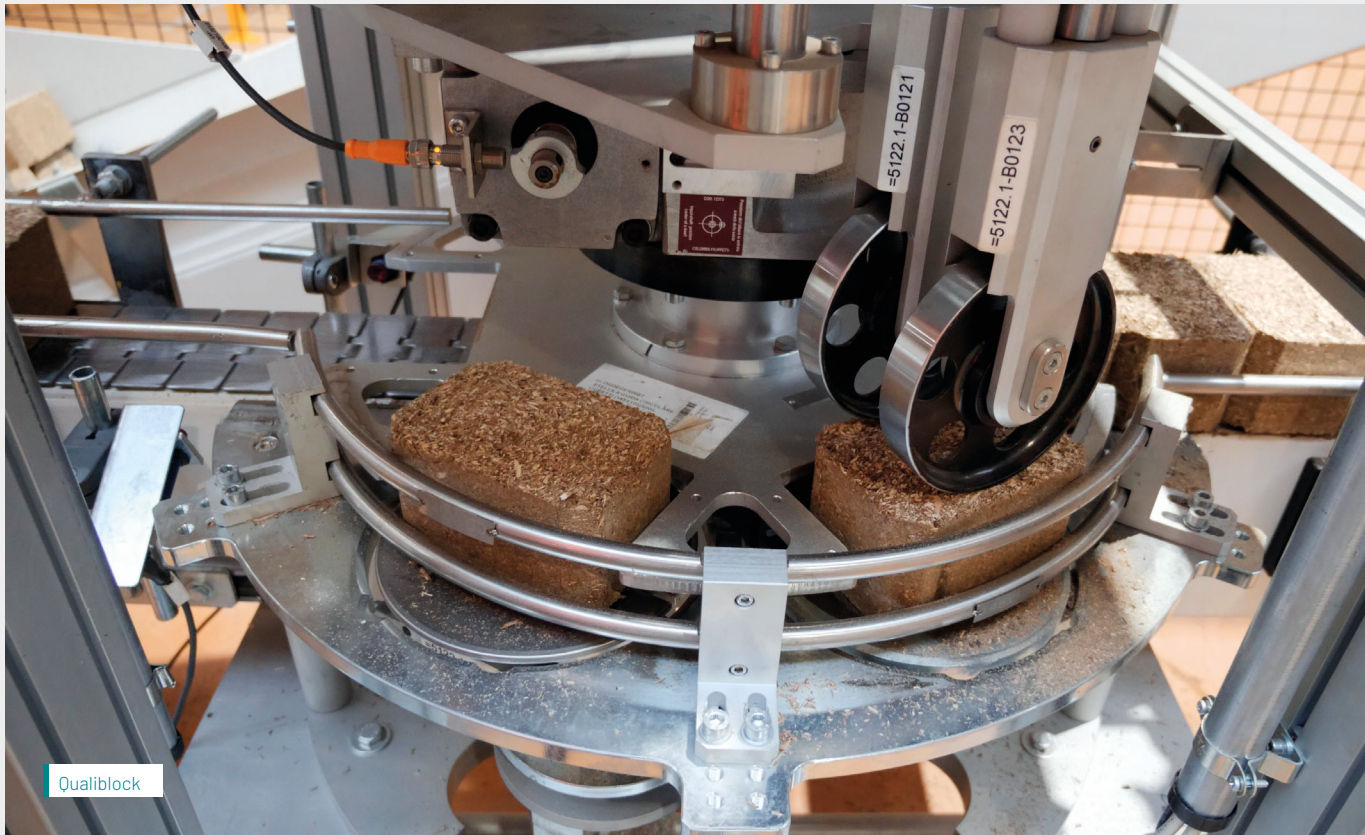

MAIN FEATURES

- The press is able to produce up to 90 m³/day depending on the pallet block format produced
- The press is extremely flexible when changing production formats
- All pallet blocks are inspected one at a time for weight, dimensions and density
- An automatic feedback goes back to the press to ensure quality and compliancy with international standards
- A special control software system carries out an accurate real time analysis of production.
